

You can hear your Child - Can your Child hear you?

Does your child talk differently than most children of the same age? Does your child seem delayed in learning new words? Does your child ignore your voice when his back is turned? These signs may indicate hearing loss. Early detection of hearing loss is vital. No child is too young to have their hearing tested.

One in ten Canadians has a speech, language, or hearing disorder. If you suspect a problem, contact a professional. Check the yellow pages or visit our Web site www.caslpa.ca to find a speech-language pathologist or audiologist near you.

May is Speech & Hearing Month!
